Wesley Williams   **Software Developer**

903-617-7858 || jobs@WesleyWilliams.dev

Summary

Full Stack Developer turning my company's ideas into functional code so they can build great webpages and apps. Currently focused on the MERN stack, and eager to strengthen those skills, or move into other web technologies.

Skills

- HTML
- CSS
- JavaScript
- Node.js
- Express.js
- "Creative" Problem Solving.
- React.js
- RESTful API
- JSON
- Programming
- MySQL
- GIT Workflow
- MongoDB
- Test Driven Development
- Written Communications
- Verbal Communications

Experience

Freelance Project: Airhorn for AirOS 7

Injects a new tool into AirOS 7's web-app, to aid aligning antenna; reducing tower-climber fatigue; improving safety and efficiency.

URL Shortening Service

Turns long URLs into short, easy to remember URLs. Built a backend running in Node.js and stores . Frontend is built with vanilla.js.

QR Code Maker

Builds QR codes with customizable color-schemes and module shapes. Built with D3.js The app is served as a static site, reducing server costs and eliminating 'server lag' when modifying the qr code.

Personal Card Catalog

Keeps track of my otherwise horribly disorganized collection of books. React.js frontend allows searching, updating and adding entries. Node.js backend presents a REST API and keeps everything in a MySQL database.
